### Final Report

#### VIROLOGY RESULTS

Caprine Arthritis Enceph Vir cELISA 01-JUL-08

ANIMAL ITEM	ANIMAL ID	SPECIES	Result
1	WTF X9 STARLIGHT	Caprine	Negative
2	TPNF W17 MINA	Caprine	Negative
3	BTH 52 CHAMBERG	Caprine	Negative
4	WTF X3 CELESTE	Caprine	Negative
5	HAZ W11 PHANTASIA	Caprine	Negative
6	DLF T3 LUNG	Caprine	Negative
7	DLF V6 WIGGY	Caprine	Negative
8	BCV1 T14 ERICA	Caprine	Negative
9	CSF7 515 CODY	Caprine	Negative
10	WTF X10 MOONLIGHT	Caprine	Negative
11	JON QUIL DLF W7	Caprine	Negative
12	WTF X1 HELIOS	Caprine	Negative
13	WTF X7 MAIA	Caprine	Negative
14	WTF X5 CALLISTO	Caprine	Negative
15	WTF X8 ATLAS	Caprine	Negative
16	WTF X2 SELEN	Caprine	Negative

#### ELISA TEST INTERPRETIVE STATEMENT:

As with any test, ELISA tests have false positives and false negatives. We recommend re-testing all positive animals 2 - 3 weeks after submission of the first sample.

#### PARATUBERCULOSIS RESULTS

Johne's AGID 02-JUL-08

14	WTF X5 CALLISTO	Caprine	Negative
15	WTF X8 ATLAS	Caprine	Negative
16	WTF X2 SELEN	Caprine	Negative

#### Johnes AGID Interpretation:

The Johnes AGID test is of low sensitivity (average 20-30%) and high specificity (>99%). It is common for infected animals to remain negative on the AGID test until their infection has progressed to an advanced stage. Therefore, a negative test result does not rule out infection, but a negative test result is unlikely (<15%) in an animal with clinical signs related to *M. paratuberculosis* infection. A positive test result is generally an indication of advanced subclinical or clinical infection. Other mycobacterial infections (uncommon) can occasionally cause (usually transient) cross reactivity on AGID. Segregation of the suspect animal and repeat testing at an interval of 10-12 weeks is recommended if test results are not in line with the clinical picture or herd status.

Fecal culture or tissue culture at necropsy is recommended to obtain definitive evidence of infection in the herd or individual animals displaying elevated serology results, or whenever significant decisions are to be made based on Johnes' test positive status.

#### BRUCELLOSIS RESULTS

Brucella Card AGGL 27-JUN-08

ANIMAL ITEM	ANIMAL ID	SPECIES	BREED	Result
1	WTF X9 STARLIGHT	Caprine	Nigerian Dwarf	Negative

15	WTF X8 ATLAS	Caprine	Negative
16	WTF X2 SELEN	Caprine	Negative

Referral Destination UNIVERSITY OF CALIFORNIA DIAGNOSTIC LAB  
Referral Case No D0807658  
Comments All samples Negative @ 1:8 for antibodies to  
Corynebacterium pseudotuberculosis.

C. pseudotuberculosis SHI titers less than 1:8 are not considered significant, and probably represent cross reactions with common environmental organisms. Titers > 1:256 have a high association with internal abscess formation.
